

## E-BAND LOW NOISE DOWNCONVERTER SiP 71 - 76 GHz

### Typical Applications

The HMC8326LG is ideal for:

- E-Band Communication Systems
- High Capacity Wireless Backhaul
- Test & Measurement

### Functional Diagram

### Features

- Conversion Gain: 12 dB typical
- Image Rejection: 30 dBc typical
- Noise Figure: 6 dB typical
- Input Third-Order Intercept (IP3): 1 dBm typical
- Input Power for P1dB Compression: -9 dBm typical
- Fully Integrated In Surface Mount 34 Lead 13 mm x 11 mm Package

### General Description

The HMC8326LG is a fully integrated System In Package (SiP) in-phase/quadrature (I/Q) downconverter that operates between an RF input frequency range of 71 GHz to 76 GHz and an IF output frequency range of DC to 2 GHz. This device provides a small signal conversion gain of 8 to 13 dB with 30 dBc of image rejection. The HMC8326LG utilizes a low noise amplifier followed by an image rejection mixer which is driven by a 6x LO multiplier. Differential I and Q mixer outputs are provided for direct conversion applications. Alternatively, the outputs can be combined using an external 90° hybrid and two external 180° hybrids for single-ended applications.

**Electrical Specifications,  $T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$ , IF = 1000 MHz, LO = 4 dBm,  
VD12\_LNA = 2 V, VD34\_LNA = 4 V, VD\_AMP = 4 V, VD\_MULT = 1.5 V, VG\_MIXER = -1 V [1]**

Parameter	Min.	Typ. (25°C)	Max.	Units
RF Frequency Range	71		76	GHz
LO Frequency Range	11.5		13	GHz
IF Frequency Range	0		2	GHz
LO Input Level Range	0		8	dBm
Gain Flatness		2	5	dB
Conversion Gain	6	12	17	dB
Image Rejection	15	30		dBc
Input Power for 1 dB Compression (P1dB)	-13	-9		dBm
Input Third-Order Intercept (IP3)	-6	1		dBm
Input Second-Order Intercept (IP2)	16	26		dBm
6x LO Leakage at the RF Input Port (RFIN)		-55	-50	dBm
I/Q Phase Balance [2]		5	10	degrees
I/Q Amplitude Balance [2]		0.2	3	dB
Noise Figure		6	8	dB

[1] Measurements performed as downconverter with lower sideband selected and two external 180° hybrids followed by one external 90° hybrid at the IF ports, unless otherwise noted.

[2] Measurements performed without external hybrids.

## E-BAND LOW NOISE DOWNCONVERTER SiP 71 - 76 GHz

**Electrical Specifications,  $T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$ ,  $IF = 1000\text{ MHz}$ ,  $LO = 4\text{ dBm}$ ,  
 $VD12\_LNA = 2\text{ V}$ ,  $VD34\_LNA = 4\text{ V}$ ,  $VD\_AMP = 4\text{ V}$ ,  $VD\_MULT = 1.5\text{ V}$ ,  $VG\_MIXER = -1\text{ V}$  [1]**

Parameter	Min.	Typ. (25°C)	Max.	Units
RF Port Return Loss	7	14		dB
DC Power Dissipation		1.0	1.25	W
Input Waveguide port		WR-12		
Baseband Output Port Impedance (differential)		100		Ohm
Baseband Output Port Return Loss [2]	10	14		dB
LO Input Port Impedance		50		Ohm
LO Input Port Return Loss	8	13		dB
VG for the LNA (VG12_LNA, VG34_LNA)	-2		0	V
VD for the LNA (VD34_LNA)	3.8	4	4.2	V
VD for the LNA (VD12_LNA)	1.9	2	2.1	V
VD for the Multiplier (VD_MULT)	1.42	1.5	1.58	V
VG for the Multiplier (VG_MULT)	-2		0	V
VG for the Mixer (VG_MIXER)	-2		0	V
Supply Current (ID12_LNA + ID34_LNA) [3]		66		mA
Supply Current (ID_AMP) [4]		175		mA
Supply Current (ID_MULT) [5]		80		mA

[1] Measurements performed as downconverter with lower sideband selected and two external  $180^\circ$  hybrids followed by one external  $90^\circ$  hybrid at the IF ports, unless otherwise noted.

[2] Measurements performed without external hybrids.

[3] Adjust VG12\_LNA between -2 V and 0 V to achieve total typical quiescent current ID12\_LNA = 22 mA. Adjust VG34\_LNA between -2 V and 0 V to achieve total typical quiescent current ID34\_LNA = 44 mA.

[4] Adjust VG\_AMP between -2 V and 0 V to achieve typical quiescent current (ID\_AMP) = 175 mA.

[5] Adjust VG\_MULT between -2 V and 0 V to achieve typical current (ID\_MULT) = 80 mA under RF drive.

## E-BAND LOW NOISE DOWNCONVERTER SiP 71 - 76 GHz

### Spurious Performance, Lower Sideband Selected

$T_A = 25^\circ\text{C}$ , IF = 1 GHz, RFIN = -20 dBm, LO = 4 dBm. Mixer spurious products are measured in dBc from the IF output power level single-ended for frequencies below 50 GHz, with all other IF ports terminated. Spur values are  $(M \times \text{IF}) + (N \times \text{LO})$ . N/A means not applicable.

**Table 8. Pin Descriptions**

Pin Number	Function	Description	Pin Schematic
1, 6-12, 14, 16, 17, 19, 21-23, 25, 27, 29, 31, 34, G1-G8	GND	Ground connections. These pins and exposed ground paddle must be connected to RF/DC ground.	
2, 3	IF_IP, IF_IN	Positive and Negative IF I outputs. These pins are dc-coupled. When operation to dc is not required, block these pins externally using a series capacitor with a value chosen to pass the necessary frequency range. For operation to dc, these pins must not source or sink more than 3 mA of current or part malfunction and part failure may result.	
4, 5	IF_QN, IF_QP	Negative and Positive IF Q outputs. These pins are dc-coupled. When operation to dc is not required, block these pins externally using a series capacitor with a value chosen to pass the necessary frequency range. For operation to dc, these pins must not source or sink more than 3 mA of current or die malfunction and part failure may result.	
13, 18	VD34_LNA, VD12_LNA	Drain voltage for the low noise amplifier. External bypass capacitor of 4.7 μF is recommended.	
15, 20	VG34_LNA, VG12_LNA	Gate voltage for the low noise amplifier. External bypass capacitor of 4.7 μF is recommended.	
24	LOIN	Local oscillator input. This pin is DC coupled and matched to 50 Ohm.	
26	VG_MULT	Gate voltage for the LO multiplier. External bypass capacitor of 4.7 μF is recommended.	
28	VD_MULT	Drain voltage for the LO multiplier. External bypass capacitor of 4.7 μF is recommended.	
30	VG_AMP	Gate voltage for the LO amplifier. External bypass capacitor of 4.7 μF is recommended.	
32	VD_AMP	Drain voltage for the LO amplifier. External bypass capacitor of 4.7 μF is recommended.	

## E-BAND LOW NOISE DOWNCONVERTER SiP 71 - 76 GHz

**Table 8. Pin Descriptions**

Pin Number	Function	Description	Pin Schematic
33	VG_MIXER	Gate voltage for the FET mixer. External bypass capacitor of 4.7 $\mu$ F is recommended.	
Port1	RFIN	WR12 waveguide port. This port is AC coupled and matched to 50 ohm.	

### Theory of Operation

The HMC8326LG is fully integrated System in Package (SiP) in phase/quadrature (I/Q) low noise downconverter that is made up of 2 functional blocks.

The RFIN port of the HMC8326LG is connected to the GaAs low noise amplifier that is made up of four stages of low noise amplification that feeds into the second block.

The second block is a GaAs I/Q downconverter with an integrated LO buffer and 6 $\times$  multiplier. The 6 $\times$  multiplier allows the use of a lower frequency range LO input signal, typically between 11.8 GHz and 12.7 GHz. The 6 $\times$  multiplier is implemented using a cascade of 3 $\times$  and 2 $\times$  multipliers. The LO buffer amplifiers are included on chip to allow a typical LO drive level of only +4 dBm for full performance. The LO path feeds a quadrature splitter followed by on-chip baluns that drive the I and Q mixer cores. The mixer cores comprise singly balanced passive mixers. The RF input of the I and Q mixers are then driven through an on-chip Wilkinson power splitter, which is then fed by the first block of the HMC8326LG.

### Bias Procedure

The HMC8326LG functional blocks uses multiple amplifier and multiplier stages, which are active stages that all use depletion mode pseudomorphic high electron mobility transistors (pHEMTs). To ensure transistor damage does not occur, use the following power-up bias sequence and do not apply RF power to the device on the LO or IF ports unless otherwise noted:

1. Apply a -2 V bias to VG\_MULT, VG\_AMP, VG12\_LNA and VG34\_LNA.
2. Apply a -1 V bias to VG\_MIXER.
3. Apply a 2 V bias to VD12\_LNA.
4. Apply a 1.5 V bias to VD\_MULT.
5. Apply a 4 V bias to VD\_AMP and VD34\_LNA.
6. Adjust VG\_AMP between -2 V to 0 V to achieve a total quiescent ID\_AMP current of 175 mA.
7. Adjust VG12\_LNA between -2 V to 0 V to achieve a total quiescent ID12\_LNA current of 22 mA.
8. Adjust VG34\_LNA between -2 V to 0 V to achieve a total quiescent ID34\_LNA current of 44 mA.
9. Apply a LO input signal on the LO port and adjust VG\_MULT between -2 V and 0 V to achieve a total ID\_MULT current of 80 mA.

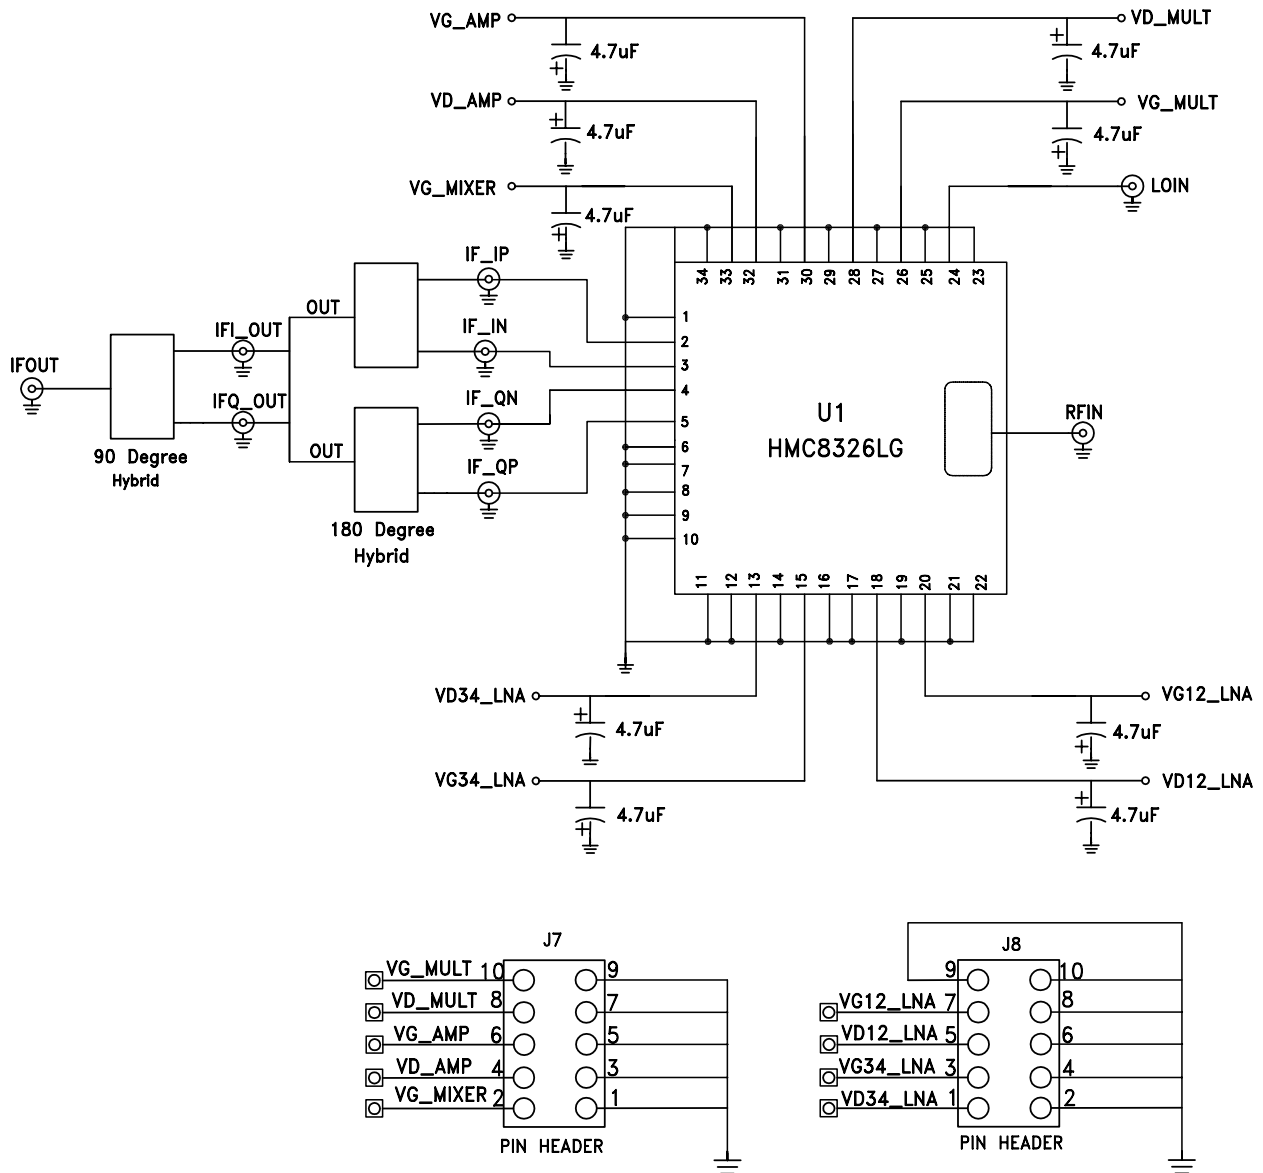

To ensure transistor damage does not occur, use the following power-down bias sequence:

1. Apply a 0 V bias to VD\_MULT, VD\_AMP, VGA\_VD12 and VD34\_LNA.
2. Apply a 0 V bias to VG\_MIXER.
3. Apply a 0 V bias to VG\_MULT, VG\_AMP, VG12\_LNA and VG34\_LNA.

## E-BAND LOW NOISE DOWNCONVERTER SiP 71 - 76 GHz

### Application Circuit

**E-BAND LOW NOISE DOWNCONVERTER SiP**  
**71 - 76 GHz**

**Recommended PCB Land Pattern and Solder Mask Keep-out**

**Recommended Standard WR-12 Footprint for Backplate**

Part List			
ITEM	QTY	VENDOR	DESCRIPTION
1	2	VARIOUS	PIN, ALIGNMENT, FLANGE, .0615 DIA

- NOTES:**
- 1.0 REMOVE BURRS AND BREAK SHARP EDGES.
  - 2.0 ALL INTERNAL RADII SHALL BE .090 UNLESS OTHERWISE NOTED
  - 3.0 SURFACE FINISH 32 RMS UNLESS OTHERWISE SPECIFIED
  - 4.0 DIMENSIONS APPLY AFTER PLATING
  - 5.0 MATERIAL: ALUMINUM 6061-T6 PER QQ-A-250/11
  - 6.0 FINISH: NONE.
  - 7.0 INSTALL DOWEL PINS.
  - 8.0 USE ELECTRONIC DATA FOR ALL GEOMETRY THAT IS NOT DIMENSIONED.

## E-BAND LOW NOISE DOWNCONVERTER SiP 71 - 76 GHz

### Evaluation PCB

### List of Materials for Evaluation PCB

Item	Description
J2, J6	SMA CONNECTOR, SRI
J7 - J8	CONNECTOR HEADER 10 POS, SMT
C1 - C4, C8 - C10	4.7 $\mu$ F CAPACITOR, SMD 3216
U1	HMC8326LG
605-01131-00	MCH, PIN PLATE, E-BAND FIXTURE
620-00229-00	EPOXY PREFORM
SCREW	SOCKET HEAD CAP, 4-40 UNC 3/16
PCB [1]	600-01236-00 Evaluation Board

[1] Circuit Board Material: Rogers 4350

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Analog Devices upon request.

### Table 20. Evaluation Order Information

Item	Contents	Part Number
Evaluation PCB Only	HMC8326 Evaluation PCB	EV1HMC8326LG [1]
