

Evaluates: MAX77646

MAX77646 Evaluation Kit

General Description

The MAX77646 evaluation kit (EV kit) allows for easy experimentation with various MAX77646 features, including the resistor programmability of the SIMO and onboard electronic loads.

The Windows®-based software provides a user-friendly graphical interface to manage the onboard electronic loads.

Ordering Information appears at end of data sheet.

Features

- Easy to Use
 - GUI-Driven I²C Interface
 - Assembled and Fully Tested
 - On-Board Electronic Loads
 - Steady-State, Transient, and Random Modes
 - Demonstration of End-to-End Analog Multiplexer Implementation
 - On-Board ADC

Quick Start

Follow this procedure to familiarize yourself with the EV kit.

Note: In the following sections, software-related items are identified by bolding. Text in **bold** refers to items directly from the EV kit software. Text in **bold and underlined** refers to items from the Windows operating system.

Required Equipment

- MAX77646 EV kit
- MAX77646 EV kit GUI
- Windows-based PC
- Power supply
- Ammeter
- DVM
- Micro-USB cable

Procedure

- 1) Install the GUI software. Visit the product webpage at www.analog.com/max77646evkit and navigate to *Design Resources* to download the latest version of the EV kit software. Save the EV kit software to a temporary folder and extract the files from the ZIP file.
- 2) Install EV kit shunts according to [Table 1](#).
- 3) Connect a Micro-B USB cable between the EV kit USB port labeled “GUI” and your Windows-based PC.
- 4) Apply a 2.4V supply (set for 100mA current limit) through an ammeter (set for 10mA range) across the INSBB and GND2 terminals of the EV kit. Turn the supply on.
- 5) Open the GUI and select **Device → Connect** in the upper-left corner. Wait for a CONNECTED DEVICE LIST window to pop up, and then press the **Connect** button.
- 6) Measure the voltages on SBB0, SBB1, SBB2, and LDO with a DMM.

Table 1. Default Shunt Positions and Jumper Descriptions

REFERENCE DESIGNATOR	DEFAULT POSITION	FUNCTION
J2	3-4	1-2: Connects RSET_SBB2 to 0kΩ which programs SBB2 to 0.5V. 3-4: Connects RSET_SBB2 to 11.8kΩ which programs SBB2 to 1.1V. 5-6: Connects RSET_SBB2 to the onboard potentiometer to program SBB2's output voltage. Refer to the <i>SiMo Output Voltage Configuration</i> section of the MAX77646/MAX77647 data sheet for more information. RSET_<regulator> is connected to RSEL_<regulator>
J3	3-4	1-2: Connects RSET_LDO to 7.15kΩ which programs the LDO to 0.8V. 3-4: Connects RSET_LDO to 80.6kΩ which programs the LDO to 1.8V. 5-6: Connects RSET_LDO to the onboard potentiometer to program the LDO's output voltage. Refer to the <i>LDO Output Voltage Configuration</i> section of the MAX77646/MAX77647 data sheet for more information.
J4	1-2	1-2: Connects INLDO to SBB0.
J5	3-4	1-2: Connects RSET_SBB1 to 14kΩ which programs SBB1 to 1.2V. 3-4: Connects RSET_SBB1 to 28kΩ which programs SBB1 to 1.8V. 5-6: Connects RSET_SBB1 to the onboard potentiometer to program SBB1's output voltage. Refer to the <i>SiMo Output Voltage Configuration</i> section of the MAX77646/MAX77647 data sheet for more information.

Table 1. Default Shunt Positions and Jumper Descriptions (continued)

REFERENCE DESIGNATOR	DEFAULT POSITION	FUNCTION
J6	1-2	1-2: Connects RSET_IPK to 47.5kΩ. 3-4: Connects RSET_IPK to 56.2kΩ. 5-6: Connects RSET_IPK to an open-through-hole radial lead for through-hole resistors. Refer to the <i>Peak Current Configuration</i> section in the MAX77646/MAX77647 data sheet for more information on how to set the peak current limit of the SIMO. RSET_IPK is connected to RSEL_IPK.
J7	1-2	1-2: Connects EN0 to INSBB, enabling SBB0. 2-3: Connects EN0 to GND, disabling SBB0.
J8	1-2	1-2: Connects RSET_SBB0 to 191kΩ which programs to 3.3V. 3-4: Connects RSET_SBB0 to 768kΩ which programs SBB1 to 5.0V. 5-6: Connects RSET_SBB0 to the onboard potentiometer to program SBB0's output voltage. Refer to the <i>SIMO Output Voltage Configuration</i> section of the MAX77646/MAX77647 data sheet for more information.
J9	1-2	1-2: Connects EN1 to INSBB, enabling SBB1. 2-3: Connects EN1 to GND, disabling SBB1.
J10	1-2	1-2: Connects INSBB to the VL side of the onboard level shifter.
J11	1-2	1-2: Connects EN2 to INSBB, enabling SBB2 and LDO. 2-3: Connects EN2 to GND, disabling SBB2 and LDO.
J201	1-2	1-2: Connects SBB0 to the onboard electronic load and ADC.
J203	1-2	1-2: Connects SBB1 to the onboard electronic load and ADC.
J205	1-2	1-2: Connects SBB2 to the onboard electronic load and ADC.
J207	1-2	1-2: Connects LDO to the onboard electronic load and ADC.
J200	1-2	1-2: Connects the gate of the Q200 load FET to the U200 amplifier.
J202	1-2	1-2: Connects the gate of the Q201 load FET to the U201 amplifier.
J204	1-2	1-2: Connects the gate of the Q202 load FET to the U202 amplifier.
J206	1-2	1-2: Connects the gate of the Q203 load FET to the U203 amplifier.

Detailed Description of Hardware (or Software)

Enable Key Options

The MAX77646 features individual hardware enable pins for each of the SIMO outputs. Note that SBB2 and LDO are connected to the same enable pin. These enable pins can be connected to INSBB (to enable the corresponding resource) or GND (to disable the corresponding resource) through jumpers in J7, J9, and J11.

Changing the Output Voltages

The SIMO's and LDO's output voltages are programmed by connecting resistors from their corresponding RSEL pins to ground. The EV kit features pre-selected resistors

which can be tied to RSEL pins through jumpers J2, J3, J5, and J8. Additionally, onboard potentiometers can be used to program the entire output voltage range. Refer to the *SIMO Output Voltage Configuration* and the *LDO Output Voltage Configuration* sections of the MAX77646/MAX77647 data sheet for more information.

Programming the Inductor Peak Current

The SIMO's inductor peak current is programmed by connecting resistors from RSEL_IPK to ground. Several pre-selected resistors are placed on the EV kit and can be tied to the RSEL_IPK pin through the jumper J6. A through-hole resistor can be placed in R30 for additional options. See the *Inductor Peak Current Setting* section of the MAX77646/MAX77647 data sheet for more information.

Electronic Load

The EV kit comes with an electronic load allowing the user to evaluate the SIMO and LDO load current capabilities. Onboard circuits set the load current through the I²C interface. J201, J203, J205, and J207 are used to connect the load to the output of the SBB0, SBB1, SBB2, and LDO respectively. To exercise the load transient response, remove J200 (for SBB0), J202 (for SBB1), J204 (for SBB2), and J206 (for LDO) and connect a signal generator to the gate of the load MOSFET (pin 2 of the respective header). Drive the gate with a signal between 1V (off) and 3V (fully on) to apply transients to the output of the SIMO or LDO. Note that there are 0.1Ω sense resistors with test points (called VIL_SBB0, VIL_SBB1, and VIL_SBB2) and a 0.5Ω sense resistor with a test point (called VIL_LDO) for a 10:1 and 2:1 conversion of load current to voltage.

Installation

Visit the product webpage at www.analog.com/max-77646evkit and navigate to *Design Resources* to download the latest version of the EV kit software. Save the

EV kit software to a temporary folder and decompress the ZIP file.

Windows Drivers

Upon connection of a Micro-USB cable between your PC and the EV kit for the first time, wait a few minutes for Windows to automatically install drivers.

Graphical User Interface (GUI) Details

The GUI software allows for a convenient, quick, and thorough evaluation of the MAX77646. When the EV kit software detects that a MAX77646 EV kit is connected, only the “Load Control” portion of the GUI can be accessed.

Load Control Tab

The **Load Control** tab contains controls for load currents on the regulator outputs. The GUI is capable of setting steady-state, transient, and random load currents. To set a load current, use the slider bar or text field to input a value (mA) and check the **Enable** box. Shuffle through the modes to exercise different load conditions.

The offset and gain values are set by Analog Devices and do not need to be altered.
